WEN CORP
WATER ENERGY NEXUS

Dissolved gas flotation units
for refinery effluent treatment

Oily water treatment, delivered on a skid

Each WEN 20K unit treats up to 20,000 barrels per day of refinery wastewater. It arrives with vessel, pumps, controls and safety system installed and tested, and is available for purchase or lease.

Equipment	**WEN 20K unit**	Service	**Oily water, DGF**
Capacity	**20,000 BPD**	Electrical	**Class I, Div. 2**
Status	**In stock, 5 units**	Supply	**Purchase or lease**

5 units in stock and ready to install Additional units available for pre-order or new production

How it works

Gas is dissolved into a recycle stream under pressure and released as bubbles averaging about 20 microns into the central cells of a six-cell vessel. The bubbles carry oil and solids to the surface for skimming; treated water leaves through the final cell.

Where it fits

- Secondary oil removal downstream of API separators
- Pretreatment ahead of biological treatment or discharge
- Added capacity during turnarounds and expansions
- Replacement of a flotation step that is not meeting limits

Why operators choose it

- Lower chemical dose from fine, evenly distributed bubbles
- Quick-connect tie-ins, safety system pre-wired
- Automated operation with 2 × 100% redundant pumps
- Acid-rated construction for harsh service

Data sheet

Rated capacity	Up to 20,000 BPD
Vessel	Atmospheric horizontal, six cells
Flotation method	Dissolved gas flotation
Gas saturation pumps	2 × 100%, dual-sided impeller
Average bubble size	About 20 µm
Control	Fully automated
Safety system	Integrated, API RP 14C
Electrical	Class I, Div. 2, UL-listed enclosures
Piping	Stainless steel, quick connect
Wetted materials	Lined vessel; Viton, PP, 316 SS
Chemical service	Acid rated (HF, HCl, brines)

Purchase or lease

Full purchase
Capital asset of the facility. Installation and commissioning included.

Lease
Monthly payments, no upfront capital. Service terms set in the lease.

Past performance: frac and produced water processing for Permian Basin and West Texas operators; water projects at multiple refineries.

Request a quotation
Send flow rate, influent oil and solids, and discharge limits for a configuration, schedule and price.
